Summary

Full-stack engineer shipping production SaaS systems serving **50+ business tenants** and processing **5,000+ daily transactions**. Experienced across distributed backends (FastAPI, Flask), modern frontends (Next.js, React), relational and NoSQL stores (PostgreSQL, MongoDB), and ML/RAG pipelines on Docker/Kubernetes (AWS, GCP). Build for measurable impact: latency, accuracy, uptime, and cost.

Experience

CurePharma Pharmacy — Software & Operations Associate

Hyderabad, India

- Architected and deployed a Flask + PostgreSQL inventory system processing **100+ invoices/day**, cutting average billing time from **180s to 30s** (**6× throughput gain**).
- Engineered automated stock-tracking and expiry-alert pipelines, reducing manual operational workload by **68%** and eliminating recurring monthly losses from expired inventory.
- Integrated WhatsApp Business API for asynchronous order summaries, improving customer follow-through rate and removing **3+ hours/day** of manual messaging overhead.
- Implemented typo-tolerant search via PostgreSQL trigram indexing, dropping prescription-entry errors by **68%** on a catalog of **2,000+ SKUs**.

Projects

Aura Co-Pilot — AI-Native SaaS for SMB Operational Intelligence *Next.js, FastAPI, PostgreSQL, MongoDB, Gemini, XGBoost, BERT, Kubernetes, AWS*

- Architected a multi-tenant cloud-native platform serving **50+ active SMB tenants**, ingesting **5,000+ POS transactions/day** with strict `org_id` row-level isolation across PostgreSQL (transactional) and MongoDB (unstructured reviews).
- Designed a fault-tolerant **RAG pipeline** over Gemini 2.5 Flash that intercepts NL queries, executes scoped SQLAlchemy aggregations on tenant data, and injects live metrics into the LLM context — serving hundreds of queries/day at **sub-1.5s p95 latency** with zero hallucinated numerics in pilot.
- Wrapped third-party LLM calls in circuit-breaker and retry layers so core POS, inventory, and dashboard endpoints **degrade gracefully** during upstream 5xx/rate-limit events — AI features fail isolated without taking business operations offline.
- Built a hybrid **XGBoost + SARIMA** forecasting engine on POS + weather data, hitting **92.3% demand-prediction accuracy** and driving an estimated **15% stockout** and **18% inventory-waste** reduction across pilot tenants.
- Containerized services with Docker, orchestrated on Kubernetes (AWS/GCP), and shipped CI/CD via GitHub Actions for automated build, test, and rolling deployment.

BillDash — Multi-Tenant SaaS POS Platform

Next.js, FastAPI, PostgreSQL, Razorpay, Docker

- Built a multi-tenant POS SaaS handling **115+ transactions/day** across **10+ pilot tenants** with isolated tenant schemas and connection pooling sustaining sub-200ms p95 API latency.
- Implemented secure JWT auth with rotating access/refresh tokens in HttpOnly, SameSite-strict cookies — mitigating XSS token theft and CSRF replay vectors.
- Integrated Razorpay with idempotent webhook handlers and signature verification, automating subscription lifecycle (activation, renewal, dunning, cancellation) with zero manual reconciliation.

CurePharma X — Production Pharmacy Management Platform

Flask, React, PostgreSQL — Live

- Shipped a full-stack platform for inventory, billing, and customer management used in daily pharmacy operations, with RBAC separating admin/customer surfaces and audit logging on all privileged mutations.
- Automated GST computation, PDF invoice generation, and end-of-day financial reporting — eliminating **2+ hours/day** of manual accounting work.

Technical Skills

Languages: Python, TypeScript, JavaScript, SQL **Frontend:** React, Next.js, Tailwind, Shadcn UI, Recharts

Backend: FastAPI, Flask, Node.js, REST APIs, Microservices, JWT/OAuth, WebSockets **Databases:** PostgreSQL, MongoDB, MySQL, Redis, SQLAlchemy

AI/ML: RAG Pipelines, Gemini API, pgvector, XGBoost, SARIMA, BERT **DevOps:** Docker, Kubernetes, AWS, GCP, GitHub Actions, CI/CD, Linux

Concepts: System Design, Distributed Systems, Multi-Tenancy, Data Structures & Algorithms

Education

Muffakham Jah College of Engineering & Technology, Hyderabad — B.E. Computer Science Engineering, **CGPA 7.75/10** 2022 – 2026

Glendale Academy International — CBSE Class XII, 85% • **Delhi School of Excellence** — CBSE Class X, 91%

Achievements & Certifications

- Solved **200+ DSA problems** on LeetCode (Arrays, Trees, Graphs, Dynamic Programming).
- AWS Certified Cloud Practitioner** — Amazon Web Services • **TCS iON National Qualifier Test** — 67 percentile.
